

Can-Jack

The Can-Jack

ADVANTAGE

The ability to safely load containers at ground level without having to put in an expensive loading dock. The Can-Jack is a portable system that can be used in modestly equipped shops at an affordable price.

You can set sea can containers on the ground or lift them onto trailers anywhere you need them. This makes the Can-jack **SAFE, VERSATILE, and AFFORDABLE.**

Simply attach the four Can-Jack legs to the four corners of any sea can container.

Using the hydraulic pack (optional) or tractor; you have the ability to raise and lower a fully loaded container.

Picture this . . . a container lowered to the ground for safe and easy access to load and then raise it again to place a trailer under it for transport.
